

Assignment for Day 4 : In Continuation with E-Commerce database**NOTE : Please take suitable sample data.**

1. Create a trigger which will generate, summarize table.
i.e. This table will have an entry for each day total sale value.
if its a first order, it will be the new entry in the above table.
else the entry will get updated for the day.

In case of refund, amount will get deducted for the same day.

There should be a column which will have record, about the date of transactions happen on this table.(createdon, Updatedon)

2. Explore Instead Of trigger and write it for a view of your choice with multiple table.
3. migrate an old table to newer one with additional columns.
